Cell receptor specific antibodies useful for treating e.g. arthritis, diabetes, multiple sclerosis and psoriasis.

Claim 1; Page 40; 81pp; English.

This sequence represents complementarity determinating region 2 (CDR H2) of the heavy chain of murine anti-CD23 (FCERII) monoclonal antibody Cl1 (See also AAY32254). The invention provides altered antibodies, such as chimeric or humanised antibodies, which comprise sufficient of the amino acid sequences of Cl1 light and heavy chain CDRs (see AAY32254-59) to

Hamilton A; Carr FJ, Bander N,

WPI; 2003-156839/15.

New modified anti-prostate specific membrane antigen (PSMA) immunoglobulins, useful for treating or preventing a prostatic or cancerous disorder, e.g. genitourinary inflammation, prostatitis, or prostatic or testicular cancer.

Disclosure; Fig 7C; 254pp; English.

The present invention relates to modified (e.g. deimmunised) antibodies to prostate specific membrane antigen (PSMA). The modified anti-PSMA antibodies are less immunogenic compared to the unmodified anti-PMSA antibodies. The modified antibodies comprise complementarity determining regions (CDRs) from a non-human antibody (e.g. murine antibody J591,J415,

M1 comprises contacting the cell, or a vascular endothelial cell proximate to the cell, with an antibody (or its antigen-binding fragment), which binds specifically to the extracellular domain of PSMA in an amount sufficient to ablate or kill the cell. The antibodies have antipsoriatic, antiarthritic, dermatological, cytostatic, antiinflammatory and antiallargic activities, and can be used in vaccines. M1 is useful for treating a skin disorder in a subject, by administering to the subject, an amount of an antibody which binds specifically to the extracellular domain of PSMA (the subject is a mammal, preferably human and is having, or at risk of, a skin disorder).
US33 or E99), and framework sequences that are less immunogenic in humans (e.g. less antigenic than the murine frameworks in which a murine CDR naturally occurs). The modified antibodies bind with PMSA, preferably human PMSA, with high affinity and specificity. The anti-PMSA antibodies are useful for treating or preventing a prostatic or cancerous disorder, e.g. genitourinary inflammation, prostatitis, benign enlargement, prostatic cancer or testicular cancer, or solid tumours, soft tissue tumours or metastatic lesions, and its associated pain. The present sequence represents a variable region from a murine antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mouse; murine; antibody; skin disorder; binding agent; PSWA; cytostatic; prostate specific membrane antigen; antipsoriatic; antiarthritic; emanatory; antiallergic; vaccine; dermal disorder; epidermal disorder; psoriasis; inflammatory disorder; epidermis; dermis; neoplastic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ablating/killing aberrant prostate specific membrane antigen-expressing cells for treating skin disorders, by contacting the cell with an antibody that binds to the extracellular domain of prostate specific
                                                                                                                                                                                                                                                                                                               Gaps

The skin disorder is a dermal or an epidermal disorder, and is selected from psoriasis (preferably chronic stationary psoriasis, psoriasis vulgaris, eruptive (gluttate) psoriasis, psoriatic erythroderma, generalised pustular psoriasis, psoriatis erythroderma, psoriasis, and localised pustular psoriasis, province carthritis, exfoliative dermatitis, pityriasis rubra planis, pityriasis rosacea, parapsoriasis, ptrylasis lichenoiders, lichen planus, lichen nitidus, lichthyosiform dermatosis, keratodermas, dermatosis, and prokeratosis, preferably psoriasis. Mi is useful for treating a skin disorder such as an inflammatory or neoplastic disorder of the epidermis or dermis, preferably an epidermal precancerous or cancerous lesion. Mi is also useful to treat or prevent disorder involving aberrant activity of PSMA-expressing cell, e.g. kidney, liver or brain cell. Acc68816 to Acc68817

This sequence represents the heavy chain variable region (VH) of murine anti-CD23 (FCERII) monoclonal antibody C11. The invention provides altered antibodies, such as chimeric or humanised antibodies (see ANY32262 and AAY32263), which comprise sufficient of the amino acid sequences of the C11 light and heavy chain complementarity determining regions (see AAY32254-59) to render them capable of binding to the CD23 (Type II molecule expressed on haematopoietic cells. The antibodies are used to block soluble CD23 formation in human therapy, for the treatment of arthritis, lupus erythematosus, Habhimoto's thyroiditis, multiple cof arthritis, lupus erythematosus, Habhimoto's thyroiditis, multiple solerosis, diabetes, uveitis, dermatitis, psociasis, uricaria, nephrotic syndrome, glomerulonephritis, inflammatory bowel disease, ulcerative colitis, Crohn's disease, Slogren's syndrome, allergic asthma, intrinsic asthma, acute asthmatic exacerbation, rhinitis, eczema, graft-versus-host disease, COPD, insulitis, bronchitis (particularly type I diabetes), and Brcell mallignancies (claimed). They are also useful for studying interactions between CD23 and various ligands and determining the binding agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New ketone compounds containing active agents useful as carriers for e.g. antitumor agents, antibiotics or fluorescent molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence may be used in the activation of new ketone prodrug compounds containing active agents. The ketone derivatives are useful as carriers for antitumour agents such as cyrotoxic agents, where the antitumour agent is a microtubule stabilising agent such as paclitaxel,
Cell receptor specific antibodies useful for treating e.g. arthritis, diabetes, multiple sclerosis and psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

epothilone or its therapeutically active analogue or an anthracycline antibiotic such as doxorubicin or its therapeutically active analogue. The ketone derivatives are useful for targeted drug delivery. The inactive molecules in the ketone compounds are converted to active molecules by retro-Michael reaction. The antibody has bifunctional activity and specifically immunoreacts with cell surface antigen of a target cell. The active ingredients can be mixed effectively with excipients as per desired amount along with the buffering agent to enhance the effectiveness and activity of the compound
                                                                                                                                                                                           Gaps

This amino acid sequence represents the heavy chain of humanised anticops (PERII) monoclonal antibody C11, composed of a human framework (EGEKYII) and the heavy chain complementarity determining regions (see AAY32257-59) of murine antibody C11. The DNA was constructed by splice overlap PCR. The invention provides altered antibodies, such as chimeric cor humanised antibodies, which comprise sufficient of the amino acid sequences of the C11 light and heavy chain complementarity determining regions to render them capable of binding to the CD23 type II molecule expressed on haematopoietic cells. The antibodies are used to block soluble CD23 formation in human therapy, for the treatment of arthritis, lupus expthematosus, Hashimoto's thyroiditis, multiple scierosis, diabetes, uveitis, dermatitis, psoriasis, urticaria, nephrotic syndrome, diabetes, uveitis, dermatitis, psoriasis, urticaria, nephrotic syndrome, colon, s disease, Sjogren's syndrome, allergies, allergic asthma, acute asthmatic exacerbation, rhinitis, eczema, graftversus-host disease, (DOP), insulitis, bronchitis (particularly dyroid interactions malignancies (claimed). They are also useful for studying interactions between CD23 and various ligands and determining the binding agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mouse; humanised antibody; CC-chemokine receptor 2; CCR2; nephrotropic; neuroprotective; immunosuppressive; human immunodeficiency virus; HIV infection; cytostatic; vasotropic; leukocyte trafficking; allergy; inflammatory disorder; autoimmune disorder; rheumatoid arthritis; shock; multiple sclerosis; atherogenesis; atherosclerosis; restenosis; asthma; anaphylaxis; malignancy; inflammation; stenosis; allograft rejection; fibrotic disease; angioplasty; acquired immune deficiency syndrome; AIDS; inflammatory glomerulopathy; vascular intervention, neointimal hyperplasia; VH; heavy chain variable region.
                                                                                                    Cell receptor specific antibodies useful for treating e.g. arthritis, diabetes, multiple sclerosis and psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The patent discloses a humanised antibody or its antigen-binding fragment, having binding specificity for CC-chemokine receptor 2 (CCR2), CC comprising an antigen binding region of non-human origin and at least a portion of an immunoglobulin of human origin. The humanised antibodies are useful for inhibiting the interaction of a cell expressing CCR2. They care useful for inhibiting leukocyte trafficking, for treating cCR2-mediated disorders such as inflammatory disorder, autoimmune invention are useful for inhibiting leukocyte trafficking, for treating CCR2-mediated disorders such as rheumatoid arthritis and multiple sclerosis, carberogenesis and atherosclerosis, and in the manufacture of a cuestul in therapy or diagnosis, and in the manufacture of a cuestul in therapy or diagnosis, and in the manufacture of a cuedicament for treating CCR-2 mediated disease. They are also useful for treating allersy, anaphylaxis, malignancy, chronic and acute confinitammation, histamine and IGB-mediated allersic reaction, shock, stenosis, allograft rejection, fibrotic disease, asthma, inflammatory confinitammatory associated with vascular intervention, including angioplasty and/or stent placement in a mammal. Humanised antibodies are also useful for inhibiting continual hyperplasia of a vessel in a mammal, and inhibiting continuinal hyperplasia of a vessel in a mammal, preferably associated with vascular intervention. The present sequence is mouse germline heavy continuing and variable (VH) region, V(H)22.1
                                                                                                      Humanized immunoglobulin for treating a CC-chemokine receptor 2-media disorder in a patient, comprises a binding specificity for CCR2, and non-human antigen binding region and human immunoglobulin.
                                                                                                                                                                                                                         Disclosure; Page 152-153; 183pp; English

```
The present sequence may be used in the activation of new ketone prodrug compounds containing active agents. The ketone derivatives are useful as carriers for antitumour agents such as cytotoxic agents, where the antitumour agent is a microtuble stabilising agent such as pacificaxel, epothilone or its therapeutically active analogue or an anthracycline antibiotic such as doxorubicin or its therapeutically active analogue. The ketone derivatives are useful for targeted drug delivery. The influetive molecules in the ketone compounds are converted to active molecules by retro-Michael reaction. The antibody has bifunctional activity and specifically immunoreacts with cell surface antigen of a target cell. The active ingredients can be mixed effectively with excipients as par desired amount along with the buffering agent to enhance the effectiveness and activity of the compound
           carriers for e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New monoclonal antibody BW835 specific for tumour antigens - useful for diagnosis and treatment of tumours affecting the breasts, ovaries,

ö

Monoclonal antibody BW 835 is produced by hybridoma cell line BW 835. The antibody strongly reacts with lung adenocarcinomas and human mammary-, ovary- and prostate carcinomas. It additionally reacts with polymorphic epithelial mucin (PEM) but does not react with normal human tissue. (Updated on 25-MAR-2003 to correct PN field.) Disclosure; Fig la; 24pp; German.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a process for preparing a crystal using cadmium. Structure factors or structural coordinates obtained from the crystal of Structure factors or structural coordinates obtained from the crystal of SMM antibody bound to an epitope can be used to design minics of the binding fragment of the SMM antibody bound to a peptide recognised by the epitope binding site of SMM. The products and methods can be used to epitope binding site of SMM. The products and methods can be used to tumours. Much epitope mimics can also be used to prevent or decrease an immune response, e.g. in the therapy of diseases caused by autoimmune response, e.g. in the therapy of diseases caused by autoimmune response, inflammatory disorders or transplant rejections such as graft versus host disease. The present sequence represents the amino acid sequence of a heavy chain variable region of SMM antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New SM3 antibody crystal structures - used to develop agents for treating e.g. tumors, autoimmune disorders, allergies, inflammatory disorders or

The invention relates to treating a human patient diagnosed with a B-cell malignancy. The method involves (a) administering to the human patient a blocking anti-CD22 monoclonal antibody binding to the first two Ig-like domains, or to an epitope within the first two Ig-like domains of native human CD22 (hCD22) (ABR82771) and (b) monitoring the response of the mailgnancy to the treatment. The method is useful for treating a human patient diagnosed with a B-cell malignancy comprising Hodgkin's lymphoma, Burkitt's lymphoma, multiple myeloma, chronic lymphocytic leukemia, hairy the amino acid sequence for heavy chain Vh-D-Jh junction for anti-CD22 antibody from hybridoma HB22-23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating an autoimmune disease or a B-cell malignancy in a human patient comprises administering an amount of an anti-CD22 monoclonal antibody to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CD22; autoimmune disease; anti-CD22 antibody; ilmmunosuppressive; cytostratic; nephrotropic; dermatological; antihiflammatory; anti-ulcer; antirheumatic; antiarthritic; antiporiatic; thyromimetic; antianemic; antidiabetic; antiallergic; gene therapy; HB22-23.
                                                                                                                                     Treating a human patient diagnosed with a B-cell malignancy by administering a blocking anti-CD22 monoclonal antibody binding to the first two Ig-like domains of native human CD22 (hCD22).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hybridoma HB22-23 anti-CD22 MAb heavy chain (VH) fragment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents the heavy chain variable region for monoclonal antibody (MAb) 4E8, which immunoreacts with a lead cation. The sequence was derived from RNA isolated from mouse hybridoma cells. The protein can be used for binding heavy metals, such as lead cations. It can be used for detecting, removing, adding or neutralising the heavy metals in biological and inanimate systems. It can be used in e.g. aqueous liquid systems, in biological or environmental systems or in such compositions as perfumes, cosmetics, harmaceuticals, health care products, skin treatment products, pesticides, herbicides, solvents used
                                                            The invention relates to treating a human patient diagnosed with an autoimmune disease. The method involves administering to the patient an amount of a blocking anti-CD22 monoclonal antibody and monitoring the response of the autoimmune disease to the treatment. The method is useful in treating autoimmune diseases (e.g. glomerulonephritis, systemic lupus erythematosus, rheumatoid arthritis, psoriasis, ulcerative colitis, Hashimoto's thyroiditis, autoimmune haemolytic anemass, diabetes or allergies) or B-cell malignancies (e.g. lymphomas or leukemias). The present sequence represents the amino acid sequence for heavy chain Vh-D-Jhiuction for anti-CD22 antibody from hybridoma HB22-23
the patient and monitoring the response of the disease to the treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA encoding heavy metal binding polypeptide sequences - used for detecting, removing, adding or neutralising heavy metals, such as lead
                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a monoclonal antibody (Mbb) (I) that binds to a human breast cancer antigen that is also bound by Mbb 454C11 and 52OC9 (produced hybridoma ATCC HB844 and HB8696, respectively). Also described is a hybridoma that produces (I). (I) is useful in specific binding assays, affinity purification, drug or toxin targeting, imaging, and genetic or immunological therapeutics for various cancers. The present sequence represents a VH domain derived from a 2G3 hybridoma, which is used in the exemplification of the present invention
in the production of semi-conductor and integrated circuit components and production materials for electronic components. The products can provide for applications involving minute amounts of specific heavy metals

Sequence 10, Application US/08483749A
Patent No. 6054561

Patent No. 6054561

STREAT INFORMATION:
APPLICANT: RING, DAVID B.
TITLE OF INVENTION:
MOLECULES SPECIFIC FOR CANCER ANTIGENS
NUMBER OF SEQUENCES:
ADDRESSEE: CHIRON CORPORATION
STREET: USA
COUNTY: USA
COUNTY: USA
ZIP: 94662-905

COMPUTER: READABLE FORM:
MEDIUM TYPE: Flopy disk
COMPUTER: INP PC Compatible
COMPUTER: INP PC Compatible
COMPUTER: INP PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFFWARE: PatentIn Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/483,749A
PILING DATE: O7-UNL-1995
CLASSIFICATION NUMBER: 36,914
REGIENTATION NUMBER: 36,914
REFERENCE/DOCKET NUMBER: 36,914
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      US-08-483-749A-10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 15, Application US/09564329A

Sequence 15, Application US/09564329A

Patent No. 6541212

GENERAL INFORMATION:
APPLICANT: Reiter, Robert E.
APPLICANT: Witte, Owen N.
APPLICANT: Witte, Owen N.
TITLE OF INVENTION: PSCA: PROSTATE STEM CELL ANTIGEN AND USES THEREOF
FILE REFERENCE: 30435.54US14

CURRENT APPLICATION NUMBER: US/09/564,329A

CURRENT FILING DATE: 1999-07-20

PRIOR FILING DATE: 1999-07-20

PRIOR FILING DATE: 1999-07-310

PRIOR FILING DATE: 1998-01-12

PRIOR FILING DATE: 1998-01-12

-!- FUNCTION: Fibrinogen has a double function: yielding monomers that polymerize into fibrin and acting as a cofactor in platelet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 aggregation.

-!- SUBUNIT: HEXAMER CONTAINING 2 SETS OF 3 NONIDENTICAL CHAINS

(ALPHA, BETA AND GAWA), LINKED TO EACH OTHER BY DISULFIDE BONDS.

-!- PTM: Conversion of fibrinogen to fibrin is triggered by thrombin, which cleaves fibrinogenides A and B from alpha and beta chains, and thus exposes the N-terminal polymerization sites responsible for the formation of the soft clot.

Blood coagulation; Plasma.

It is produced through a collaboration
                                                                                                                                                          DNA, followed by passage and rejoining.

-!-SUBNIT: Monomer (By similarity)
-!- MISCELLANEOUS: When a topoisomerase transiently breaks a DNA
backbone bond, it simultaneously forms a protein-DNA link, in
which a tyrosyl oxygen in the enzyme is joined to a DNA phosphorus
at one end of the enzyme-severed DNA strand.
-!- SIMILARITY: Belongs to the prokaryotic type I/III topoisomerase
            STRAIN=NCTC 418 / ATCC 15380; MEDIATE-94220019; PubMed-8166630; MEDIATE-94220019; PubMed-8166630; MEDIATE-94220019; PubMed-8166630; Characterization of the CysB protein of Klebsiella aerogenes: direct evidence that N-acetylserine rather than O-acetylserine serves as the linducer of the Cysteine regulon."; Biochem. J. Bacteriol. 177:5088-5098(1995).
--- FUNCTION: Required for coenzyme pyrroloquinoline quinone (PQQ)
biosynthemis. Probably provides the glutamate and tyrosine
residues that are cross-linked and modified to form the coenzyme.
---- PATHWAY: Pyrroloquinoline quinone (PQQ) biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             STRAIN=NCTC 418;

J. Biol. Chem. 273:2639-2644(1998).
-!- FUNCTION: Potent selective inhibitor of Kv1 voltage-gated
potassium channels (By similarity).
-!- STORELLUIAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the short scorpion toxin family. Potassium channel inhibitor subfamily.
PROSITE; PSOILIS; COORP SHORT_TOXIN; 1.
Toxin; Neurotoxin; Ionic channel inhibitor.
Potassium channel inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Koschak A., Bugianesi R.M., Mitterdorfer J., Kaczorowski G.J., Gardia M.L., Khaus H.-G., "Subunit composition of brain voltage-gated potassium channels determined by hongotoxin-1, a novel peptide derived from Centruroides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Shearin J;

WPI; 2000-053101/04. N-PSDB; AAZ34744. Cell.receptor specific antibodies useful for treating e.g. arthritis, diabetes, multiple sclerosis and psoriasis.

Claim 1; Page 40; 81pp; English.

This sequence represents complementarity determinating region 3 (CDR H3) of the heavy chain of murine anti-CD23 (FCBRII) monoclonal antibody Cl1 (See also AAN32253). The invention provides altered antibodies, such as chimeric or humanised antibodies, which comprise sufficient of the amino acid sequences of Cl1 light and heavy chain CDRs (see AAN32254-59) to

The present invention describes a polypeptide comprising a human myelin basic protein (hMBF) fragment including P89-101 of hMBP, excluding native hMBP. The term P89-101 is not defined but may be intended to mean amino acids 89-101 of hMBP. The polypeptide can be used for tolerising a mammalian host immune system comprising B and T cells to an immunogen of interest,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               wherein said immunogen is restricted by a transplantation antigen of said host. (Updated on 25-MAR-2003 to correct PF field.) (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                     Myelin basic protein, immunity, immune response, neurological; T-cell, human; immunogen; B-cell; transplantation antigen; immunomodulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Polypeptide comprising human myelin basic protein fragment - useful as immuno modulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

The invention relates to a purified peptide mimotope capable of binding specifically to an antibody specific to estradiol. Also included are a solid support having immobilised (releasably) or non-releasably) peptide mimotopes, an immunoassay test device for the detection of estradiol in the sample, comprising the mimotopes and an antibody capable of binding specifically to the mimotopes to generate a detectable signal and an isolated nucleic acid encoding the peptide mimotopes. The mimotope is useful for assaying the presence and/or amount of estradiol preferably estrone-3-glucuronide in a sample which is unine or sarum sample to be tested and is also utilised and immunoassay test device, and further can be used as immunogens. The mimotope be used to construct new, or improve the performance of old, immunoassay test formats and devices. They can, for example, be utilised essentially to tune the signal in conventional displacement assays for the detection of estradiol. The mimotope can be bound directly to certain assay surfaces which are conventional displacement assays for the detection of estradiol. The mimotope can be bound directly to certain assay surfaces which are convention to the surface by complexing with another - often proteinaceus contection of estradiol, in the presence of excess quantities of other undesired materials, and tightly enough affinity) that when used in an immunoassay, it provides a togething the antion and in the present sequence is a peptide mimotopes of the

```
This invention describes a novel method for modulating or tolerizing the immune system, and for treating multiple sclerosis comprising definities the speptide derived from hMBP (human myelin basic protein). The peptide induces an autoimmune response (T cell) to a self-antigen (or part of it), and binds to an MHC (major histocompatibility complex) antigen of a host susceptible to autoimmune diseases, i.e. competes with binding to MBP and inhibit proliferation of MBP-reactive cells. The peptide has immunosuppressive and neuroprotective activity. This sequence represents a peptide derived from the human MBP protein which can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Modulating or tolerizing the immune system, useful for treating multiple sclerosis, by administering a peptide derived from human myelin binding protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ..

Novel antagonists of endothelin are claimed which are C-terminal hexapeptides and analogs of ET-1. The first (N-terminal) amino acid of the new peptides has D-configuration. The peptides are claimed generically. The present peptide is a specifically claimed example of the generic compounds. The peptides are useful for treating hypertension, metabolic and endocrine disorders, congestive heart failure, myocardial infarction, endotoxic shock, subarachnoid haemorrhage, arrhythmia, asthma, acute and chronic renal failure, preeclampsia, diabetes, neurological disorders, pulmonary hypertension, ischaemic disease, ischaemic bowel disease, gastric mucosal damage, Raynaud's disease, restenosis, percutanseous transluminal coronary angioplasty, angina and cancer. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAN31412-W31459, AAW31461-W31481, AAW31483-W31493 and AAW39053-W39076 are fragments used in an assay to determine novel transcriptional activators.
                                                     New hexa:peptide derivs. inhibiting endothelin - for treatment of e.g. renal failure, hypertension, asthma, restenosis, angina, cancer etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Activating sequence; Gal4; transcriptional activator; RNA polymerase; Protein-protein interaction; gene therapy; therapeutic; holoenzyme; Gal11; DNA binding domain.

The method involves the production of transcriptional activators comprising of a DNA-binding group and a 6-25 amino acid peptide that is covalently bonded to the DNA binding group and does not represent a fragment of a natural transcription activator. Protein protein interactions are identified in the assay by fusing a DNA-binding domain interactions are identified in the assay by fusing a DNA-binding domain to a library of DNA fragments and introducing this and a fusion of target protein and a polypeptide containing a region of Ga14 which interacts with GallP into a cell containing a region of Ga14 which interacts with GallP into a cell containing a region of Ga14 which interacts with constructs are used to activate transcription in a cell, e.g. for controlling gene activity, particularly in gene therapy (e.g. recognizing a site close to a selected hrapeutic gene). Transcription can be activated without blocking other transcriptional activators. They probably act by interacting with a component of the RNA polymerase II holoenzyme, Galli, the strongest known yeast activator, which provides a more sensitive assay allowing detection of even weak protein-protein interactions. Such activators do not create toxicity problems even when
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to the use of peptides as claudin-mediated cell adhesion modulators. The claudin-6 and claudin-9 groups of proteins are cadherins, which are membrane glycoproteins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and these peptides can be used to modulate these levels, and thus treat autoimmune diseases, inflammatory diseases and cancer, and aid wound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antibody modulation of claudin-mediated cell adhesion for increasing vasopermiability, for delivering drugs to tumors and the nervous system and across the skin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claudin-6 modulating agent; claudin-9 modulating agent; cell adhesion recognition sequence; CAR sequence; autoimmune disease; inflammatory disease; cancer; graft rejection; cyclic.

The claudin-3 group of proteins are cadherins, which are membrane glycoproteins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and these peptides can be used to modulate these levels, and thus treat autoimmune diseases, inflammatory diseases and cancer, and aid wound healing and implant adhesion. In addition, they can also be used to facilitate drug delivery to the desired target site. The present sequence has a cyclic
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antibody modulation of claudin-mediated cell adhesion for increasing vasopermiability, for delivering drugs to tumors and the nervous system and across the skin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The claudin-4 group of proteins are cadherins, which are membrane glycoproteins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and these peptides can be used to modulate these levels, and thus treat autoimmune diseases and cancer, and aid wound healing and implant adhesion. In addition, they can also be used to facilitate drug delivery to the desired target site. The present sequence has a cyclic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cytochrome P450 polypeptide 2C8; CYP2C8; arachidonic acid metabolism; cancer; cardiovascular disease; cytostatic; cardiovascular; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antibody modulation of claudin-mediated cell adhesion for increasing vasopermiability, for delivering drugs to tumors and the nervous system and across the skin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                            Claudin-4 cyclic cell adhesion recognition sequence SEQ ID NO: 174.
                                                                                                                                                                                                                                               Claudin-4 modulating agent; cell adhesion recognition sequence; CAR sequence; autoimmune disease; inflammatory disease; cancer; graft rejection; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ·.

                                                                                                                                                                                                                             New polymorphic variants of the gene encoding Cytochrome P450 polypeptide 2C8 (CYP2C8), useful for diagnosing or treating a disease, e.g. arachidonic acid metabolism, cancer or cardiovascular diseases.
                                                                                                                                                                                                                                                                                                                          The invention describes a new polynucleotide comprises a polynucleotide: (a) having any of 101 nucleic acid sequences with 18-19 bp fully defined in the specification; (b) encoding any of seven polypeptides having 7 amino acids, or a polypeptide with 3 amino acids; (c) capable of hybridising to a Cytochrome P450 polypeptide 2CB. (CYP2CB) gene; (d) encoding a molecular CYP2CB variant polypeptide or its fragment. The polynucleotide, gene, vector, polypeptide or antibody is useful for diagnosing or treating a disease, for preparing a diagnostic composition for treating a disease, or for preparing a pharmaceutical composition for treating a disease. This diseases includes arachidonic acid metabolism, cancer or cardiovascular diseases. This is the amino acid sequence of a human cytochrome P450 polypetide 2CB (CYP2CB) wild type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cytochrome P450 polypeptide 2C8; CYP2C8; arachidonic acid metabolism; cancer; cardiovascular; gene therapy.

WPI; 2003-167344/16

New polymorphic variants of the gene encoding Cytochrome P450 polypeptide 2C8 (CYP2C8), useful for diagnosing or treating a disease, e.g. arachidonic acid metabolism, cancer or cardiovascular diseases.

Disclosure; Page 58; 178pp; English

The invention describes a new polynuclectide comprises a polynucleotide:

(a) having any of 101 nucleic acid sequences with 18-19 bp fully defined in the specification; (b) encoding any of seven polypeptides having 7 amino acids, or a polypeptide with 3 amino acids; (c) capable of hybridising to a Cytochrome P450 polypeptide 2C8 (CYP2C8) gene; (d) encoding a molecular CYP2C8 variant polypeptide or its fragment. The polynucleotide, gene, vector, polypeptide or antibody is useful for diagnosing or treating a disease, for preparing a diagnostic composition for treating a disease. This disease includes arachidonic acid metabolism, cancer or cardiovascular diseases. This is the amino acid sequence of a human cytochrome P450 polypetide 2C8 (CYP2C8) wild type peptide

Gour BJ;

Antibody modulation of claudin-mediated cell adhesion for increasing vasopermiability, for delivering drugs to tumors and the nervous system and across the skin. WPI; 2000-365610/31.

Claim 55; Page 99; 121pp; English.

The present invention relates to the use of peptides as claudin-mediated cell adhesion modulators. The claudin-3 group of proteins are cadherins, which are membrane glycoproteins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and these peptides
